

Background

I saw a child tied with a rope and locked in the house, alone. She was unable to access food, water or even the washroom. Since she has ADHD (attention deficit hyperactive disorder) / intellectually disabled and her parents were unaware about the disability, Khushi wasn't enrolled in a school or exposed to the outside world.

Vision & Mission

Integration & inclusion of the population with developmental disabilities into mainstream society through education, therapy, capacity building and policy support by strengthening governmental institutions aiming at sustainable and strategic change.

Guiding Principles / Values

1. Design and implementation of low cost effective models supporting visions of integration and inclusion
2. Developing models social in nature by keeping it less medical and more adaptable in nature
3. Making disability intervention available at grassroot level
4. Targeting DISABILITY :awareness, identification, intervention, mainstreaming with effective methodologies

- Urmi is growing with the enrollment of over 2500+ with 23 special schools.
- We focus on creating homogenous groups and based on challenge & reflection, we change our methods of intervention designed learning aids accordingly.
- Our data reflects qualitative and quantitative information that help our teachers understand mentioned challenges and plan accordingly.
- The data is often handled manually to obtain multiple level results - consequently it becomes challenging, time consuming and creates space for numerical mistakes.
- Urmi's team is currently procuring this data by personally coordinating with stakeholders and performing on ground operations

- We are looking for a solution which solves the mentioned problem
- Quick and effective data analysis methods giving our teachers more time to find solution instead of calculating numbers and finding challenges
- Avoid calculation errors and arrive at the better solutions
- How can this platform help share the impact and progress made to stakeholders such as higher management, board members, educational institutions etc.

- The offered solution will help Urmi to grow and also translate the results into government systems
- Replicate the solution with other special education organizations willing to adopt Urmi's model
- Easier tracking and management of Urmi's children's progress parameters
- Expand impact to over 3000+ beneficiaries individually
